### SUMMER JAZZ WORKSHOPS

For information concerning the finest in jazz education write to SUMMER JAZZ WORKSHOPS, c/o the address below. Our week-long Workshops (and the 2-day “Anyone Can Improvise!” Seminars) are held in locations all over the United States and are open to people of all ages, all abilities and all instruments. You will not find a better program anywhere in the world!

Call 1-800-456-1388, or visit our website for the most up-to-date info: [www.summerjazzworkshops.com](http://www.summerjazzworkshops.com)
GENERAL INFORMATION

This booklet is designed to give you the basics which you will need in order to learn the art of improvising in music. Many feel that people who improvise or play jazz are special. If they are special, it is because they have spent their time wisely learning the tools of the trade. A few of the tools are: scales, chords, patterns, licks, songs (standards and originals), training the ear, listening to records of jazz greats and any other thing which they feel will contribute to the growth of a well-rounded musician.

I feel it is good to establish a practice routine, especially for those of you who are new to learning the language of jazz. To play jazz requires discipline, and discipline is good for all of us.

The language of jazz or the jazz idiom is in a constant state of flux. In order to be a part of the jazz movement one must accept change. Jazz has changed greatly over the past 70 years and is presently in transition. Each generation of jazz musicians contribute their own unique ideas, feelings, and sound to the music and this is what creates the change. If you equip yourself well, you may be one of those people who influence others and set new trends in jazz.

If you want to get it all together, I suggest reading each of the pages in this booklet very carefully. Mark with pen or pencil points that you feel are important so when you flip through the pages in the future your eye will catch them. Listen, listen, listen carefully to anyone playing jazz or improvising. You can learn much from live performances as well as records. Start a record collection and listen to what has been recorded over the past 85 years. You are in for a treat!

Spend your practice time wisely. Don’t play things over and over that you can already play. This is great for the ego but does little to advance your musical progress. Be patient with yourself. Don’t expect everything to come at one setting. They say that things come to us when we are ready to accept them. A healthy mental state is also responsible for progress when practicing.

Gradually train your ears to really HEAR music and all of the components that make the final product. Read the pages on Ear Training carefully and institute a daily routine to improve your perception. There are also other pages that help spell out an excellent practice routine.

Since most of us do not have a good rhythm section at our disposal, I recommend practicing and soloing with the play-a-long records. Each volume contains a book and one or two CDs. Many professionals use these recordings to warm-up, keep in shape, practice new patterns or licks, or to learn new songs and improvise on the chord/scale progressions.

During the past 43 years, many private teachers as well as high school and college teachers have made the recordings part of their daily or weekly teaching assignments. It is good to begin playing with a rhythm section as soon as possible and the better they are the more you can benefit from the experience. I personally still practice with my Play-A-Longs in order to continue to progress musically.

Playing jazz teaches self-esteem and independence.

I highly recommend our SUMMER JAZZ WORKSHOPS which are offered in the U.S. each summer. Some of the finest performers and teachers of jazz appear at these workshops. Write to: Summer Jazz Workshops, P.O. Box 1244, New Albany, IN 47151-1244, or visit www.summerjazzworkshops.com for more information.

Lastly, play on the best instrument that you can afford and study with the finest teachers available.

May your journey in music, and jazz in particular, be as enjoyable as it has been for me in putting this booklet together for you.

- Jamey Aebersold
VALUABLE JAZZ INFORMATION

The basic ingredients in music are SCALES, CHORDS, MELODY, RHYTHM, and HARMONY. Jazz education’s purpose is to give you the basics you need in learning to play jazz or to improvise. The jazz musician is an instant composer! The melodies which come from their instruments are conceived in their mind just before they play them. The difference between the improviser and the traditional composer is: that the "jazzier" has no eraser to instantly correct mistakes. They practice long and hard trying to make their physical body and their mental frame of mind an appropriate vehicle to execute the ideas formulated in their mind.

The GOAL of every jazz musician is to play on their instrument (or vocally sing) what is heard in their mind. Practicing scales, chords (arpeggios), exercises in all keys will help gain facility which will help unlock the ideas that are now being held prisoner in your mind. As soon as possible, try playing what you HEAR mentally in your head! In other words, sing a short melody mentally, or sing with your mouth, and then play those exact pitches and rhythms on your instrument. This is the same procedure the jazz player uses when improvising.

To play requires discipline. It is good to establish a practice routine. Improvisation should be a part of your daily practice. Play whatever you hear in your head. It could be something from TV, radio, or just some melodies that you hum to yourself. This is also a form of EAR TRAINING. You are training your inner ear to direct your fingers to the notes it hears, instantly. Gradually train your ears to really HEAR music and all of the components that make the final product. Listen carefully to anyone playing jazz or improvising. You can learn much from live performances as well as recordings. Start a collection and listen to what has been recorded over the past 80 years.

The old myth that says, “You either have it or you don’t,” is strictly a myth founded on ignorance and the inability (or unwillingness) of those who can play to share what they do verbally with those who think they can’t learn.

The mind is the originator of ALL musical thoughts. The mouth (singing) usually can approximate the pitches, rhythms, and nuances of what the mind hears better than actual instruments (sax, trumpet, etc.) can do. Since the instrument we have chosen is a learned device, it is the least able to reproduce the musical thoughts of our mind. It stands to reason that the person who is better equipped technically will come closer to playing on their instrument the thoughts of their mind.

One of the reasons the jazz greats sound different than you is the fact they have so many sounds (scales, chords, patterns, ideas) at their disposal. The SCALE SYLLABUS can help you uncover new sounds. Practicing, using the exercises found in this booklet or in Vol. 1 “How To Play Jazz And Improvise” will give you a good foundation to play ANY style of music.

“JAZZ IS FREEDOM!” Thelonious Monk said this. Too often we refuse to take advantage of an opportunity which will allow us a measure of growth and freedom in our musical expression. Listening to jazz greats is inspirational and rewarding. Keep this in mind: practicing exercises, patterns, licks, scales, and chords should lead to more expressive creativity, not boredom.

HOW DO YOU BEGIN IMPROVISING? Many people begin by playing by ear (letting their inner musical ear guide their choice of notes and rhythms). This is a hit-or-miss process that most jazz players (before 1965) had to use to learn their trade. However, this method strengthens the player’s ear and is extremely valuable. Everyone should spend time each day playing by ear. The sooner you train your ears to discern, the sooner they can HELP YOU in making music. By using your ear, and knowledge of the needed scales and chords, you will hear much more comfortably with beginning improvisation.

IMPORTANT: Don’t get hung up practicing exercises and more exercises without ever attempting to improvise. Avoid becoming a person who plays great exercises, but delays using their creative energy until tomorrow. DO IT NOW! IMPROVISE. Even if you only use a few notes of the scale, begin there. START! Don’t put it off until tomorrow or until you have the scale under better control. DO IT NOW! The longest journey begins with a single step. Today is the first day of the rest of your life. The longest musical phrase begins with a single note.

Just because you practice scales, chords, patterns, and exercises doesn’t mean you will sound stiff and mechanical, OR that you will become a jazz great! But it’s a means to an end. More than any other ingredient, the JAZZ TRADITION is based on LISTENING. Listening to jazz records/tapes should be part of every musician’s daily routine. Not only is it fun to listen to, but you can absorb many musical ideas and incorporate them into your own solos. Recorded music contains most answers you seek.

Having “good ears” means you have the ability to hear the roots to the various chords or scales that are being played; having the ability to hear the quality of the chord or scale--major, minor (what kind of minor?), pentatonic, dim whole tone, etc.; it means having the ability to tell what tone of the scale or chord is being played at any point in the solo—“ah, that note was a #4 resolving to the 6th and then resolving to the 5th!”; it means hearing the piano, bass, soloist, drums, etc. individually as well as collectively.

There are many levels of hearing. Some people hear. Other people can really HEAR! And some can seem to hear and identify almost anything that is being played. They can seem to sing or play back portions of solos right after the performer has played. How can they HEAR, and we can’t seem to find the roots, scale, qualities, or what time signature the piece is in? They have worked hard at identifying all the various sounds they hear daily. Since they want to improvise, they take the time to apply on their instrument the things they are hearing. They also use their mind and their free time to figure out things harmonically, melodically, and rhythmically. Using a small chromatic pitch pipe is real helpful in identifying pitches when you are not at a piano or don’t have your instrument. You can carry it with you and train your ear “on the go.” No one knows or could truly imagine the amount of thought each jazzier has put into their art/craft.

PRACTICE SUGGESTIONS
1. Play with good sound/tone. Wind players -- support your sound. Don’t play staccato.
2. Make phrases flow naturally; even when playing scales and exercises.
3. Mentally sing the exercises, scales, patterns as you play them.
4. If an exercise is hard, slow it down. Then gradually increase the tempo.
5. Listen to every note you play. Match your mind’s ideas.
6. Be patient. You’re not the first to make mistakes.
7. Use jazz articulations on exercises and scale/chord practice.
8. Improvise some every day. That’s the REAL YOU. Play what you hear in your head.
9. Make a habit of practicing in all twelve keys. Volumes 21 and 24 are excellent.
10. Learn the Blues in Bb & F concert keys.
11. Memorize everything you can. Know what it is you are trying to play.

If we all waited until we were perfect musicians before we played an instrument, there would be no music in the world. Play on the best instrument you can afford and study with the finest teachers available who will give you guidance in jazz and traditional music.

Use your imagination. Experiment- take chances! You deserve to be creative! Treat yourself.
SOLOING
by Jamey Aebersold

1. Keep your place - don’t get lost. If you do get lost LISTEN to the rhythm section. The drummer will often give a little crash at the beginning of new sections. If you hit a note that is not what you intended, move it up or down a half-step and you’ll probably be back in the scale (or chord). Remember, jazz music usually moves in two, four and eight bar phrases. You’re never far from a new phrase beginning.

2. Play right notes. This really means play the notes you hear in your head ... the notes you would sing with your mouth. Having the scales and chords in front of you on a piece of paper is merely a guide. They don’t provide the actual music that’s going to be played. THAT comes from YOUR imagination. If you’ve got the scales, chords, and chord/scale progression MEMORIZED it provides courage to your imagination and allows you to operate from a more creative natural basis. It allows you to take some chances. It helps remove FEAR.

3. Using REPETITION and SEQUENCE is natural in music. It’s found in all types and styles of music. The novice improvisor often feels that if they repeat an idea, everyone knows they are going to repeat it, so why do it; plus it’s not original enough for your EGO so you don’t play it. WRONG! The listener needs to hear some repetition and sequence or else they can’t remember anything you play. Repetition and Sequence are the glue that holds solos together. The usual number of times something is repeated depends on you but the average is 2 or 3 and then your mind will tell you when to repeat and/or when to use sequence. It’s a part of the way we hear music played by others.

4. CHORD TONES (the 1, 3, 5, & 7 of a scale) are great notes to begin and end a phrase with. Just sing a phrase and see if you don’t follow this simple rule. Our ears HEAR chord tones first so it’s natural to begin and end there. Plus, it gives us and the listener what we’re listening for - harmonic stability.

5. SOUND: Be sure that you are getting a good, full sound on your instrument (or voice). Don’t let the scales and chords or the progression or tempo intimidate you. Sound is foremost and is the FIRST thing a person latches onto when you sing or play. It leaves a lasting impression. So, be yourself and let your voice or instrument ring out. It’s the main ingredient of your musical personality.

6. LISTENING: There’s no way anyone is going to play jazz or improvise well without listening to those musicians who have come before. Through listening alone you can find ALL the answers. Each musician is a result of what they have listened to. It’s easy to determine who people have listened to by listening to them play. We all tend to use imitation and it’s good to do this. Some feel that if they listen to others they’ll just sound like them. This is not true but your ego will try to convince you it’s true. The ego hates competition or what it perceives to be competition. Don’t let it fool you. If no one listened to anyone else, why play music? Music is for everyone and truly is a Universal Language.

7. Everyone has the ability to improvise - from the youngest child to the senior citizen. You have to have desire and set aside time to work at it until moving your fingers becomes automatic and the distance between your mind and fingers grows smaller and smaller to where you think an idea and your fingers are already playing it. It’s not magic. If it is, then magic equals hard work and perseverance. When asked, “What is the greatest obstacle to enlightenment?” the Buddha replied, “Laziness.” I agree!

Some of Jamey’s Recommended Play-A-Long Volumes are:
1, 24, 3, 21, 116, 84, 54, 70, 47, and 120

New Play-A-Long Upgrades -- Slow Tempo CDs

Several Play-A-Longs now include a NEW slow tempo CD.
Improvising, playing jazz, is the most natural way to make music. Long before the printing press was invented, people played music on various instruments and all were thought to be creative musicians. Through the ages, the art of improvising on a musical instrument gradually lost favor to the printed page. In the twentieth century, the art of improvising has been kept alive by the jazz musician.

Today’s jazzer is not the same as the musician of the thirties, forties, or fifties. The influence of jazz education, sound recordings, videos, and jazz festivals has allowed the music to reach many more people and to be experienced by almost anyone who is willing to give it a try.

For years the myth “you either have it or you don’t” was prevalent in music circles around the world. If you wanted to play jazz, you had better get adopted into a musical family or by the “luck of the draw” find the right environment for your early years so by osmosis you could pick up on the hot licks and at the same time develop a great jazz ear so that when you played your instrument, you would sound like a jazzer.

Time has proven that these ideas which were very popular are not true. They never were true, but many musicians thought they were and that’s what gives an idea its longevity. Once people from non-musical backgrounds in non-jazzy environments began playing the music and playing it well, everyone had to take another look at what goes on when someone stands up and improvises a good solo over a standard chord progression such as Green Dolphin Street, Confirmation, or the blues.

Here are several ingredients that go into making a good jazz soloist/improvisor:

1. Desire to improvise
2. Serious listening to jazz via recordings and live performances
3. A method of practice - what and how to practice!
4. A rhythm section with which to practice and improvise (via live group or play-a-long recordings)
5. Self-esteem, discipline, and determination.

When I was a teenager, I wondered if I’d ever be able to play on my instrument the melodies I was hearing in my head. I didn’t have a jazz teacher so I would listen to the radio or records and try to take off the ideas of the jazz greats such as Coleman Hawkins, Charlie Parker, Dizzy Gillespie, Sonny Stitt, Chet Baker, Sonny Rollins and many others. If I were to start again here’s how I would do it:

I would begin by playing on my instrument simple little melodies such as Happy Birthday, Twinkle, Twinkle Little Star, and Row, Row, Row Your Boat. I would pick a note in my middle register say, G, and begin playing one of these songs. When I finally played it correctly ONE time, I would pick a new starting note say, Eb and play the same song beginning on that note. Do this over and over beginning on different tones until you can play the song starting on different notes without mistakes. Then try a different song and get so you can play it starting on any of the twelve notes of the chromatic scale. This is an excellent way of conditioning your fingers and mind to work together to produce the sounds you are hearing in your head. It shortens the distance from mind to fingers.

Jazz musicians have always played the music of their mind—what they hear in their head. They aren’t special, gifted people who were born with more talent than others. They just had more desire and discipline than others. Their ability to mentally hear an idea and then play it comes from practice.

When you run out of ideas to practice you listen to other musicians. The joy of listening to others, coupled with your imagination, will lead to fresh musical ideas. The answer to every musical question may be found on recordings. That is why listening is so important for the beginning improvisor.

Usually, we begin improvising on songs like blues in Bb or F, Satin Doll, Maiden Voyage, or Summertime. Songs like these don’t contain tricky rhythms or difficult harmony (scales and chords). This makes it easier to make sense of the song and feel relatively good about improvising over the harmony. These songs (and many more) are on the Vol. 54 “Maiden Voyage” play-a-long.

Here are several exercises every professional jazz musician has probably played at one time or another. Play these over the harmony (changes, chord/scales) to whatever song you are working on. Do this before you try to improvise.

1. Play the first five notes to each chord/scale.
2. Play the triad (notes 1,3, and 5 of the scale).
3. Play the entire scale from the root (first note) to the 9th and back down.
4. Play the 7th chord up and down (1,3,5,7,5,3,1).
5. Play the 9th chord up and down (1,3,5,7,9,7,5,3,1).
6. Play the scale up to the 9th and then come back down the chord.
7. Play the chord up to the 9th and then come back down the scale.
8. Play the scale in thirds up and down.
If you were to take numbers 1, 2, and 3 from above and apply them to the first four bars of an F blues, it would look like this:

1.  
   \[ \begin{align*}
   &\text{F7} \\
   &\text{Bb7} \\
   &\text{F7} \\
   &\text{ETC.}
   \end{align*} \]

2.  
   \[ \begin{align*}
   &\text{F7} \\
   &\text{Bb7} \\
   &\text{F7} \\
   &\text{ETC.}
   \end{align*} \]

3.  
   \[ \begin{align*}
   &\text{F7} \\
   &\text{Bb7} \\
   &\text{F7} \\
   &\text{ETC.}
   \end{align*} \]

I once heard trumpeter Woody Shaw warming up before a concert in the above manner. It impressed me because I thought only beginners used this type warm-up. After thinking about it, I realized it was the most practical way to approach any new song. When you do this you are conditioning your mind and fingers to the scales and chords which you will in turn improvise over. It makes good sense!

You should be able to do this to the chord/scale progression to any song you are going to improvise over. This is standard practice and has been for some time ...know your scales and chords before you play. Memorize them, too! Memorizing melodies, scales and chords gives courage to your imagination.

Now, some will feel that to play jazz, you don’t study or practice scales and exercises just play.” I ask, what does that mean? Who can “just play” over Giant Steps, Tune Up, Confirmation, Star Eyes, the blues or a thousand other tunes with interesting chord progressions? The famous alto saxophonist Charlie Parker in his own words said there was a period of 3 to 4 years where he practiced 11 to 15 hours a day. If Charlie Parker was, as many say, a genius, he got that way by practicing. I have a recording of him saying this in an interview with Paul Desmond. I also have a recording of him saying at age 16 (after having gotten laughed off the bandstand for not knowing you’re suppose to play the same song the band is playing!), “I never stopped to think about there being other keys or nothin’ like that.” So, he began like most of us but eventually discovered that HE was master of his own ship. He took the bull by the horns and dove into the marvelous world of jazz—the world of improvisation, harmony, rhythm, melody, creativity, imagination and life.

If you’ve ever wondered why teachers begin students with fingerings, tone production (wind instruments) and scales, I feel it’s to form a strong foundation for the students’ creativity. Your instrument reflects your musical personality.

Transcribing solos or portions of solos off recordings is one of the best ways to find out what the professional is doing to make things sound so good. By analyzing a solo you can find important facts:

1. What note of the scale do they begin phrases with?
2. What note of the scale do they end their phrases with?
3. Do they use a wide or narrow range, (tessitura)?
4. Do they use chord tones in their phrases?
5. Do they use scales or bits and pieces of scales?
6. Do they have favorite licks that pop up over and over?
7. Do they use chromatics (notes outside the basic chord scale)?
8. Do they use passing tones?
9. Repetition: do they use it and how ...rhythmically, melodically, harmonically?
10. Do they use space, rests, silence? How often? Is there a pattern?
11. Do they build their solo? Does the solo seem to tell a story or go somewhere?
12. Do they tend to place chord tones (1, 3, 5) on beats 1 and 3 (in 4/4 time).
13. Do they incorporate substitute scales over the basic chord/scales?
14. Do they double-time any phrases (this usually means playing in 16th notes)?
15. Do they use the blues scale? How often?
16. Do they use sequences in their playing?

Having spent over 50 years working with musicians of all levels, I find that one of the fundamental needs is to express themselves in an improvisatory manner on their instrument. Playing jazz has been the route those musicians have taken.

Creativity and use of imagination is essential to our well-being as humans on the planet Earth. We are creative beings. With a little guidance everyone can learn to improvise and enjoy the fruits of self-expression in music. There’s really nothing to be afraid of. Life is exactly what you make it to be.
SUGGESTED LISTENING - JAZZ ARTISTS

5. BARITONE SAX - Pepper Adams, Nick Brignola, Harry Carney, Serge Chaloff, Ronnie Cuber, Charles Davis, Gerry Mulligan, Leo Parker, Pat Patrick, Cecil Payne, Sahib Shihab, Gary Smulyan

6. TENOR BONE - Ray Anderson, Mill Bernhardt, Barnett Brown, Hal Crook, Eddie Davis, Rob Eubanks, John Fedchock, Carl Fontana, Curtis Fuller, Urie Green, Slide Hampton, Bill Harris, Conrad Herwig, J.J. Johnson, Delfeayo Marsalis, Grachan Moncur, Frank Rosolino, Roswell Rudd, Jack Teagarden, Steve Turre, Bill Watrous, Phil Wilson, Kai Winding

8. CLARINET - Don Byron, John Carter, Eddie Daniels, Buddy DeFranco, Eric Dolphy (bass clarinet), Paquito D’Rivera, Frank Glover, Benny Goodman, Jimmy Giuffre, Woody Herman, Bob Mintzer (bass clarinet), Art Pepper, Chris Potter (bass clarinet), Russell Procope, Pee Wee Russell, Tony Scott, Artie Shaw, Phil Woods

9. GUITAR - Howard Alden, George Benson, Peter Bernstein, Joshua Breckstone, Kenny Burrell, Charlie Christian, Dave Cliff, Joe Cohn, Larry Coryell, Herb Ellis, Steve Esquivia, Tal Farlow, Chris Flory, Bill Frisell, Mick Goodrick, Grant Green, Jerry Hall, Joe Hall, Scott Henderson, Charlie Hunter, Vic Juris, Barney Kessel, Earl Klugh, Peter Leich, Pat Martino, John McLaughlin, Pat Metheny, Ben Moeder, Wes Montgomery, Joe Pass, Doug Raney, Jimmy Raney, Django Reinhardt, Emily Remler, Mike Scher, Dan Stryker, Attila Zoller

10. PIANO - Geri Allen, Lynne Arriale, Kenny Barron, Bruce Barth, Paul Bley, Dave Brubeck, Ray Bryant, George Cables, Joey Calderazzo, Michel Camilo, Chick Corea, Kenny Drew, George Cables, Dave Gil, Victor Feldman, Tommy Flanagan, Hal Galper, Red Garland, Erroll Garner, Larry Goldings, Benny Green, Dan Haerle, Al Haig, Herbie Hancock, Roland Hanna, Hampton Hawes, Fred Hersch, Andrew Hill, Ahmad Jamal, Keith Jarrett, Hank Jones, Geoff Keezer, Wynton Kelly, Andy LaVerne, Mike LeDonne, Mark Levine, John Lewis, Harold Mabern, Ron Mathews, Brad Meldau, Mulgrew Miller, Thelonius Monk, Michel Petrucciani, Harry Pickens, Phineas Newborn Jr., Makoto Ozone, Danilo Perez, Oscar Peterson, Bud Powell, Renee Rosnes, Gonzalo Rubalcaba, Horace Silver, Art Tatum, Jacky Terrasson, Bobby Timmons, Lennie Tristano, McCoy Tyner, Cedar Walton, Benny Werner, James Williams, Mary Lou Williams, Joe Zawinul, Denny Zeitlin

13. VIBES - Roy Ayers, Gary Burton, Dave Friedman, Terry Gibbs, Lionel Hampton, Stefan Harris, Jay Hoggard, Bobby Hutcherson, Milt Jackson, Joe Locke, Steve Nelson, Red Norvo, Dave Pike, David Samuels, Cal Tjader

14. ORGAN - Joe DeFrancesco, Barbara Dennerlein, Charles Earland, Larry Goldberg, Richard “Groove” Holmes, Mike LeDonne, Hank Marr, Jack McDuff, Jimmy Mcgriff, John Patton, Jimmy Smith, Dan Wall, Sam Yahel, Larry Young

15. BIG BANDS - Airmen of Note, Toshiko Akiyoshi, Count Basie, Louis Bellson, Carla Bley, Francy Boland, Duke Ellington, Don Ellis, Gil Evans, Maynard Ferguson, Bob Florence, Dizzy Gillespie, Woody Herman, Conrad Herwig’s Latin Big Band, Bill Holman, Thad Jones/Lewis, Stan Kenton, Mel Lewis/Jones, Wynton Marsalis, Bob McConnell, Charles Mingus, Mingus Dynasty Big Band, Bob Mintzer, Monday Night Vanguard Orchestra, Eddie Palmieri, Tito Puente, Sun Ra, Buddy Rich, George Russell, Maria Schneider, Llew Tabackin, Bill Watrous, Randy Weston, Gerald Wilson

17. SCAT SINGERS - Louis Armstrong, Chet Baker, Denis DiBlasio, Kurt Elling, Ella Fitzgerald, Dizzy Gillespie, John Hendricks, Bobby McFerrin, Jennifer Barnes, Clark Terry

18. VIOLIN - Darol Anger, John Blake, Regina Carter, Sara Caswell, Jerry Goodman, Stephen Grappelli, Joe Kennedy Jr., Ray Nance, Jean-Luc Ponty, Randy Sabien, Stuff Smith, Joe Venuti, Michael White, Fiddler Williams

19. CELLO - David Baker

18. HARMONICA - Toots Thelemans
HISTORICALLY SIGNIFICANT RECORDINGS

If you want to learn to play jazz you have to listen, listen, listen. But many times students don’t have any idea what recordings to buy. So we have created this list of many of the most important recordings in jazz.

Most of the recordings listed are from the 40’s, 50’s & 60’s Bebop era. This is due to the strong influence this particular period of music has had on our current “jazz” scene today. We have purposely omitted a number of very early recordings because 1) many of those early recordings had very poor sound quality, 2) the artists recorded lots of material, and so they are represented by later recordings elsewhere on this list, and/or 3) the early recordings are not currently available on CD. If you have a turntable, you should start checking out yard sales and thrift stores—often you can find classic jazz recordings on vinyl for next to nothing.

For each record listed, you can see the artist name followed by the name of the album.

• CANNONBALL ADDERLEY - SOMETHIN’ ELSE
• HERBIE HANCOCK - MAIDEN VOYAGE
• CLIFFORD BROWN - STUDY IN BROWN
• JOHN COLTRANE - BLUE TRAIN
• CANNONBALL ADDERLEY & COLTRANE
• WAYNE SHORTER - SPEAK NO EVIL
• HORACE SILVER - SONG FOR MY FATHER
• DIZZY GILLESPIE - SONNY SIDE UP
• MILES DAVIS - KIND OF BLUE
• JOHN COLTRANE - GIANT STEPS
• J.J. JOHNSON - THE EMINENT, VOLUME 1
• ERIC DOLPHY - OUT TO LUNCH
• OLIVER NELSON - BLUES & THE ABSTRACT TRUTH
• LEE MORGAN - THE SIDEWINDER
• HANK MOBLEY - SOUL STATION
• MILES DAVIS - MILESTONES
• WES MONTGOMERY - SMOKIN' AT THE HALF NOTE
• LEE MORGAN - CORNBREAD
• LARRY YOUNG - UNITY
• SONNY ROLLINS - SAXOPHONE COLOSSUS
• JOHN COLTRANE - MAINSTREAM 1958

• ELLINGTON, MINGUS, ROACH - MONEY JUNGLE
• DIZZY GILLESPIE - ROY AND DIZ
• BENNY CARTER - FURTHER DEFINITIONS
• JOHNNY GRIFFIN - TOUCH TENOR FAVORITES
• COUNT BASIE - THE COMPLETE ATOMIC BASIE
**TIPS FOR LEARNING A NEW TUNE**

1. Listen to the song over and over.
2. Memorize the melody in your mind. Be able to sing it.
3. Listen carefully to the bass line and the harmony in general. Get an overall sense of how the song is put together.
4. Try playing the melody from memory, slowly at first.
5. Then play the melody along with the recording. Copy inflections, articulations, slurs, phrasing, dynamics, etc.
6. Learn the scales and chords in the order as they appear in the song. Make sure you’ve got the right changes (chord progression). Get them from a reliable source, such as the play-a-long books.
7. Improvise over the harmony, keeping in mind the original melody as a frame of reference.
8. Emphasize the thirds and sevenths of scales in your soloing.
9. Memorize both melody and chord/scales if you haven’t already. Know where the chord tones are ON YOUR INSTRUMENT.
10. Improvise your original melodies based on what your mind HEARS. Let your mind guide your choice of notes, phrasing, rhythms, articulations, etc...
11. Listen constantly to the original recording of the song to further stir your imagination. Incorporate ideas of the recording into your solos.
12. Learn the lyrics if the song has any. Mentally sing the lyrics while playing the melody.
13. Fall in love with the melodies to songs. Play them like YOU wrote them.

“I’ve always tried to recreate melodies even better than the composers who wrote them. I’ve always tried to come up with something that never even occurred to them. This is the challenge: not to rearrange the intentions of the composers but to stay within the parameters or what the composers have in mind and be creative and imaginative and meaningful.” -- tenor saxophonist Joe Henderson

(Taken from Jamey’s volume 1 book: “How to Play and Improvise”)

**PRACTICE PROCEDURES FOR MEMORIZING SCALES AND CHORDS TO ANY SONG**

1. Play root/tonic note of each chord_scale
2. Play first 2 notes of each scale
3. Play first 3 notes of each scale
4. Play the first five notes of each scale
5. Play triad of the scale (1, 3, and 5 of the scale)
6. Play 7th chords (1, 3, 5, and 7th tones of the scale)
7. Play 9th chords (1, 3, 5, 7, and 9th tones of the scale)
8. Play the entire scale up and down
9. Play 6th chords (1, 3, 5, and 6th tones of the scale)
10. Play up the scale to the 9th and back down the chord tones
11. Play up the 9th chord and then come back down the scale
12. Play the scale in broken thirds up and down (1, 3, 2, 4, 3, 5, 4, 6, 5, 7, etc., up & down)

The above approach can be used when learning the scales and chords to ANY song, or, when learning any new scale. You may want to use a metronome when the tempo on the recording is too fast for you. You’ll want to play these exercises UP and DOWN. If you feel you need further practice with any particular scale/chord there are many more patterns and exercises available from various practice books.

Once you become familiar with the various scales and chords and gain adequate facility you won’t have to practice these type exercises any more. Remember, the exercises are merely to help you MAKE MUSIC.
PRACTICE PROCEDURE FOR MEMORIZING SCALES AND ChORDS TO ANY SONG

The eight exercises listed below represent the typical jazz approach to learning the basic harmony for the blues in Bb. You'll want to vary the rhythms to add variety and make them sound more improvised. You can use this approach for learning ANY scale or chord to ANY song. The Bb blues progression is taken from the Volume 42 "Blues In All Keys."

As you play, memorize the chord/scale progression as well as the chord and scale tones. After playing through these eight choruses, I think you'll be surprised how easy it is to memorize. Concentrate on the SOUND of each note.

Think of the blues progression as being three four-bar sections. It has a beginning (4-bars), a middle section (4-bars), and an ending (4-bars). After you become familiar with various scales and chords, you won't need to go through this practice procedure when working on a new tune. You'll already have the needed scales and chords memorized. This is what the professional jazz musician has done. Commit to memory and enjoy making music. Remember, the purpose of any exercise is to help you truly MAKE MUSIC. Your OWN music.
SONG LIST FOR BEGINNERS

Here are songs which everyone should eventually know—they are good jam session songs. I am listing the key(s) they are most often played in followed in parenthesis by the play-a-long volume number(s) where you can find them. Most of the beginning songs are on the Volume 54 “Maiden Voyage” play-a-long book/recording set. It’s excellent for learning jam session tunes.

**Beginning Songs**
Blues in Bb & F (1, 2, 21, 35, 42, 50, 53, 54, 69, 70, 73)
Footprints, C− (33, 54)
Satin Doll, C (12, 54, 66)
Doxyn, Bb (8, 54)
Autumn Leaves, G− (20, 44, 54, 67)
Impressions or So What, D− (28, 50, 54)
Summertime, D− (25, 54)
Song For My Father, F− (17, 54)
Maiden Voyage, A− (11, 54, 8 1)
Silvers Serenade, E− (17)
Cantaloupe Island, F− (11, 54)
Sugar, C− (5, 49, 70) (called Groovitis)
Watermelon Man, F (11, 54)

**Intermediate Songs**
Four, Eb (7, 65, 67) [F#− B7]
Perdido, Bb (12, 65, 67) [bridge]
All Blues, G (5 0, 8 1) [D7+9, Eb7+9, D7+9]
Groovin High, Eb (43) [A− D7]
Yardbird Suite, C (6, 69) [bridge]
Softly As In A Morning Sunrise, C− (40) [bridge]
On Green Dolphin Street, Eb (34, 59)
Misty, Eb (41, 49, 70) [A− D7/ C− F7 in bridge]
Just Friends, F (20, 34, 59) [Ao or Ab−]
Killer Joe, C (14, 70) [bridge]
Sweet Georgia Brown (39, 67, 70, 84)
Indiana (Back Home Again In) (6, 61, 80, 84)
Girl From Ipanema, F (31, 70, 90)

**Advanced Songs**
Stella by Starlight, Bb or G (15, 22, 59, 68) [entire tune]
Star Eyes, Eb (34, 59) [bars 4, 5, & 6]
Invitation, C− (34, 59) [entire tune]
Have You Met Miss Jones?, F (25, 74) [bridge]
I Got Rhythm, Bb & F (7, 8, 16, 47, 51)
Giant Steps, Eb (28, 68) [entire tune]
All The Things You Are, Ab (16, 36, 43, 55) [entire tune]
Most ballads
Wayne Shorter tunes (33), Horace Silver tunes (17, 18), John Coltrane tunes (27, 28), Benny Golson tunes (14) and thousands of other songs

**Memorize the melody**
**Memorize the chord progression**
**Memorize the various scales/chords**

Be discriminate in your listening. Remember, you’re training your MIND!
Choose your music like you would your friends.

Think of how many friends’ voices you can recognize over the telephone after they say only one word. The qualities of scales (major, minor, dom.7th, dim., etc.) will become just as familiar and easy to recognize with practice.
SCALES

Chords

Major = 1 2 3 4 5 6 7 8
Minor = 1 2 3 4 5 6 b7 8
Diminished = 1 2 3 4 5 6 b7 8
Augmented = 1 2 3 4 5 6 7 8

7th Chords

Major = 1 3 5 7 = CΔ
Minor = 1 b3 5 7 = C
Diminished = 1 b3 b5 b7 (6th) = C°

These are the three most-used scales and chords.

Half-dim. = Ø = 1 b2 b3 4 b5 b6 b7 8

BØ = CΔ = B C D E F G A B

Half-diminished scales are the same as a major scale 1/2 step above.

Blues scale = 1 b3 4 #4 5 b7 8

Major pentatonic = 1 2 3 5 6 8
Minor pentatonic = 1 b3 4 5 b7 8
Minor pent. (J. Coltrane) = 1 2 b3 5 6 8

Scales are your best friends—get to know them inside out.
They’ll do whatever you ask them to do. Make sure you know them well.

Chords

Major = 1 3 5
Minor = 1 b3 5
Diminished = 1 b3 b5
Augmented = 1 3 #5

7th Chords

Major = 1 3 5 7 = CΔ
Minor = 1 b3 5 7 = C
Diminished = 1 b3 b5 b7 (6th) = C°

1) Δ = Major 7th, it can mean a major scale (CΔ)
or it can mean a major 7th note (C−Δ)
2) 7 = Lowered 7th
3) − = Minor (usually Dorian Minor)
4) o = Diminished scale or chord
5) Ø = Half-diminished scale or chord
6) + or # = Raise the note 1/2 step
7) − or b = Lower the note 1/2 step
8) −3 = Minor third interval (= 3 half-steps)
9) b9 after a letter (dom.7th chord) means there are 3 altered tones: 9, #9 & #4
10) #9 after a letter (dom.7th chord) means there are 4 altered tones: b9, #9, #4 & #5
INTRODUCTION TO THE SCALE SYLLABUS

Each chord/scale symbol (C7, C−, C∆+4, etc.) represents a series of tones which the improvisor can use when improvising or soloing. These series of tones have traditionally been called scales. The scales listed here are the ones I most often hear musicians play. I have listed the Scale Syllabus in the key of C Concert so you can have a frame of reference and can compare the similarities and differences between the various chords/scales.

This SCALE SYLLABUS is intended to give the improvisor a variety of scale choices which may be used over any chord - major, minor, dominant 7th, half-diminished, diminished and suspended 4. Western music, especially jazz and pop, uses major, dominant 7th, Dorian minor and Blues scales and chords more than any other. Scales and chords used less often are the half-diminished, diminished and suspended 4. If we agree on these five chord/scale families as being the most predominant, then we can set up categories and list substitute scales beneath each heading ... see the Scale Syllabus page. You should also check out Volume 26 “The Scale Syllabus” for more help with scales.

Each category begins with the scale most closely resembling the chord/scale symbol given to the left. The scales are arranged according to the degree of dissonance they produce in relation to the basic chord/scale sound. Scales near the top of each category will sound mild or consonant. Scale choices further down the list will become increasingly tense or dissonant. Each player is urged to start with the scales at the top and with practice and experimentation gradually work his way down the list to the more dissonant or tension-producing scales. You should work with a new scale sound on your instrument until your ears and fingers become comfortable with all the tones in the scale. Also try singing the scale with your voice. Improvise with your voice over the scale you are learning and then reproduce on your instrument what your voice has created.

Music is made of tension and release. Scale tones produce either tension or relaxation. The improvisor's ability to control the amount and frequency of tension and release will, in large measure, determine whether he is successful in communicating to the listener. Remember - you, the player, are also a listener! Read Volume 1 JAZZ: How To Play And Improvise for a more detailed explanation of tension and release in melodic development.

Any of the various practice procedures and patterns listed in Volumes 1, 2, 3, 21, 24 or 84 can be applied to any of the scale choices listed in this Scale Syllabus. Needless to say, any scale you want to learn should be transposed and practiced in all twelve keys. The column on whole and half step construction I have listed for each scale on the syllabus should prove helpful when transposing a scale to any of the twelve keys.

For additional information on scale substitution, I recommend Scales for Jazz Improvisation by Dan Haerle, Jazz Improvisation by David Baker, Patterns for Jazz (Treble-Clef or Bass Clef) and Complete Method for Jazz Improvisation by Jerry Coker, and Repository of Scales & Melodic Patterns by Yusef Lateef. These books are available from your favorite music source or visit www.jazzbooks.com for more information.

Several Play-A-Long sets offer you an opportunity to practice the various scales in all twelve keys. They are: Vol. 24 Major & Minor; Vol. 84 Dominant 7th Workout; Vol. 21 Gettin’ It Together; and Vol. 16 Turnarounds, Cycles & II/VI’s. You might also check out the Play-A-Longs which have tunes in all keys: Vol. 42 Blues In All Keys; Vol. 47 Rhythm In All Keys; Vol. 57 Minor Blues In All Keys; and two more volumes, Vol. 67 Tune Up and Vol. 68 Giant Steps - each has several classic tunes in all twelve keys.

Scales and chords are the backbone of our music and the better you equip yourself, the more fun you will have playing music.
### THE SCALE SYLLABUS

**LEGEND:**  
H = Half Step, W = Whole Step; ∆ = Major 7th; + or # = raise H; b or - = lower H; ø = Half-dimensional; –3 = 3H (Minor Third)

### NOTES:
1) The above chord symbol guide is my system of notation. I feel it best represents the sounds I hear in jazz.
2) Even though a C7+9 would appear to have only a raised 9th, it also has a b9, +4 and +5. The entire C7+9 scale looks like: Root, b9, +9, 3rd, +4, +5, 7th & root (C, D, E, F, G, A, B, C).
3) This is a Diminished scale and my chord symbol abbreviation is C7#9.

Players should be aware that each chord symbol represents a series of tones called a scale.
**NOMENCLATURE**

**LEGEND:** + or ♯ = raise 1/2 step; — or ψ = lower 1/2 step; H = Half Step; W = Whole Step

Because jazz players, composers, educators and authors haven’t agreed on a common nomenclature for writing chord and scale symbols, the novice will have to become familiar with several different ways of writing the same scale sound.

Listed below are the most common symbols in order of usage - most-used to least-used. The symbol that is boldface is the one I have used most often. Notice that throughout this book you will see C7 and C to designate a major chord/scale sound. I am doing this so you can begin to get better acquainted with various nomenclature.

Δ = Major scale/chord or major seventh (CΔ). A (7) after a letter means to lower the 7th note of the scale, making it a Dominant 7th quality (C7). A dash (–) when located beside a letter means to lower the third and seventh of the scale 1/2 step, thus making it a minor tonality (Dorian minor) (C–). Ø means half-diminished (CØ). C–Δ means a minor scale/chord with a major 7th. –3 means 3 half-steps (a minor 3rd). A Ø above a letter means diminished (CØ = diminished scale/chord).

* These are the most common chord/scales in Western Music.

I believe in a reduced chord/scale notation that allows our creative side, our natural side (right brain function) to have direction and guidance without feeling inhibited or limited. When we speak of “quality” we mean whether it is Major, Minor, Dim., or whatever. I have tried to standardize the chord/scale symbol notation in my books. Since some have been out many years there are instances where I may have used a different chord symbol in one book than I used in this one.

I feel the improvisor needs as little notation as possible in order to transcend the actual nomenclature on the page. The more numbers, letters and alterations that appear on the page, the less chance they will have to remove their thoughts from the written page and express what is being heard in their mind. That is why I prefer C, C7, C–, CØ, C7±9, C7♭9. Remember, we are playing a music called jazz, and it contains many altered tones. Once we learn the various alterations and their corresponding abbreviated chord symbol, why keep writing all the alterations beside the chord symbol? Check out carefully the Scale Syllabus! Listen to Volume 26 “The Scale Syllabus.”

Remember: 2nd’s are the same as 9th’s, 4th’s are the same as 11th’s, 13th’s are the same as 6th’s. Example: Key of C ... the 2nd, D, is the same as the 9th, D. Often a composer will simply write their preferred name of the scale beside the chord symbol, such as Eb–Δ (melodic minor), F– (phrygian), F– (phrygian).
THE DOMINANT 7th TREE of SCALE CHOICES

The two most important notes in any scale are the 3rd and 7th. They tell the listener what the quality is and indicate the harmonic motion. The 3rd tells us if it’s major or minor. The 7th tells whether the sound is stable (doesn’t want to move to another chord) or if it wants to move on to a chord of resolution. Dominants typically want to resolve to a chord up a perfect 4th (C7 wants to resolve to F, F-, F7 etc.). The root or tonic is taken for granted. If it wasn’t there we wouldn’t be able to identify the sound.

Any of these scales (qualities/sounds/sonorities) may be played when a dominant 7th chord/scale RESOLVES to a chord/scale whose ROOT lies a perfect 4th (5 half-steps) above the root of the dominant 7th chord.

EXAMPLE: || C7 | C7 | F | F | Ab7 | Ab7 | Db- | Db- ||
Embellish the measures with these chords: C7 and Ab7

The altered tones are in bold type. Those tones usually resolve by half-step to a scale or chord tone. This amounts to tension then release. It’s a natural occurrence in music. The 3rd’s and 7th’s are underlined.

SCALES

1. DOM.7th = C7 = C D E F G A Bb C
   This is the basic dominant 7th sound. Be careful how you treat the 4th tone. Use it as a passing tone.

2. BEBOP = C7 = C D E F G A Bb B C
   Play B natural as a passing tone. It should always appear on an upbeat never on the downbeat.

3. LYDIAN DOM. = C7#4 = C D E F# G A Bb C
   The #4 was/is a favorite note. It used to be called a b5.

4. WHOLE-TONE = C7+ = C D E F# G# Bb C
   This scale only has 6 tones. It is a symmetrical scale used often in cartoon music and by DeBussy and Ravel. [Has a #4 and #5]

5. DIMINISHED = C7b9 = C Db D# E F# G A Bb C
   This scale has 8 different tones. It is symmetrical and is also used in cartoon music. Michael Brecker is a master of this scale sound. [Has a b9, #9 and #4]

6. DIM. WHOLE-TONE = C7+9 = C Db D# E F# G# Bb C
   This scale has four altered tones which help create tension. [Has a b9, #4 and #5]

7. SPANISH or JEWISH SCALE = C7 (b9) = C Db E F G Ab Bb C
   This scale is used often when playing in a minor key. It’s the same as F harmonic minor. [Has a b9 and b6]

8. CHROMATIC SCALE = C7 = C C# D D# E F F# G G# A A# B B C
   (the Musical Alphabet) C Db D Eb E F Gb G Ab A Bb B C
   Any time there is a dominant 7th, you may want to experiment with these scales. The proper use of these various scales is part of what makes jazz so appealing. Endless variety in the hands of a master makes beautiful music. Don’t be afraid to try these sounds. It may take some time for your ears to become accustomed to the sound and the fingerings. The book called Patterns For Jazz (Aebersold product code “P-T” for treble clef instruments, “P-B” for bass clef) lists jazz phrases based on many of the scales above.
Below are several exercises every musician should memorize and be able to play in all MAJOR, MINOR (Dorian Minor), and DOMINANT 7th keys. These are basic exercises which will help you gain speed and dexterity. Begin by practicing slowly, then gradually increase speed. Strive for smoothness and slur each exercise. Keyboard and string players should play legato. After you get the feel of several, consult the ARTICULATIONS chapter. These exercises are great for warming up each day. You can apply these to ANY scale or chord, regardless of quality. Due to space considerations, I have only listed three qualities.

I strongly urge you to practice the above exercises, using as a guide any of the following root sequences to assure yourself of practice in all keys.

1. C D♭ E♭ F G A A♭ B♭ B C
2. C F B♭ E♭ A♭ D♭ G♭ E A D G C
3. C D E F A♭ B♭/ D♭ E♭ F G A B D♭
5. C B B♭ A A♭ G G♭ F E♭ E♭ D D♭ C

I strongly urge you to practice the above exercises, using as a guide any of the following root sequences to assure yourself of practice in all keys.

1. C Db D Eb F F# G Ab A Bb B C
2. C F Bb Eb Ab Db Gb B E A D G C
3. C D E F# Ab Bb/ Db Eb G A B Db
4. C Eb Gb A/ E Db E G Bb/ D F Ab B
5. C B Bb A Ab G Gb E Eb/ D D# C
6. C Eb Db E D F Eb Gb E G F Ab Gb A G Bb/ A B A C
Your voice has been with you much longer than your instrument. Use it to sing with; then transfer the music to your instrument.

TREBLE CLEF

Major, Dominant 7th, and Minor Scales
The scales are written in all 12 keys from the root (first note of any scale) to the 9th of that scale. The blackened-in notes are chord tones: root, 3rd, 5th, 7th and 9th.

The 12 Major (Ionian) Scales To The 9th
Half & Whole Step Construction: WWHWWWH

The 12 Dominant 7th (Mixolydian) Scales To The 9th
Half & Whole Step Construction: WWHWWWH

The 12 Minor (Dorian) Scales To The 9th
Half & Whole Step Construction: WWHWWWH

Whole Tone Scales (Augmented)
Half & Whole Step Construction: WWWWWW
There are only two Whole Tone Scales

+ C7 D7 E7 F7 A7 (G#7) B7 C#7 E#7 (D#7) F7 G7 A7 B7

Diminished Scales
Whole & Half Step Construction: WWHWWWH
There are only three Diminished Scales

This diminished scale fits these chord symbols:
C6 7, E6 7, G6 7, A6 7, C#6 7, E#6 7, G#6 7, D#6 7, F#7 A6 7, B6 7, D6 7, F6 7, A#6 7, B#6 7, also B7#9, E7#9, A7#9, B7#9, also D7#9, E7#9, A7#9, C7#9, also G7#9, B7#9, D7#9

Diminished Whole Tone Scales
Half & Whole Step Construction: WWHWWWW
Also called “Altered” or “Super Locrian.”
Contains i6, ii6, i5, in addition to the root, 3rd & 7th.

+9 C7#9 D7#9 (C7#9) D7#9

E7#9 (D7#9) E7#9 F7#9 G7#9 A7#9
F7#9 (G7#9) A7#9 B7#9
A7#9 B7#9 (A7#9) B7#9

Half-Diminished Scales
Half & Whole Step Construction: WWHWWWW
called (minor 7, b5) or Locrian.
Raise second tone a half-step to form the Half-Dim. 9 Scale

Ø C0 C#0 (D#0) D0
E0 (D0) E0 F0
F0 (G0) G0 A0
A0 B0 (A0) B0
It doesn’t hurt to think or to use your mind. Of course, your ego will tell you otherwise.

**EAR TRAINING**

When a person tries to develop his capacity to better hear the sounds going on around him, he is faced with several problems which aren’t necessarily present when reading music or chord symbols from the written page.

Having “good ears” means having the ability to hear the roots to the various chords or scales that are being played; having the ability to hear the quality of the chord or scale ... major, minor (what kind of minor?), pentatonic, dim. whole tone, etc.; it means having the ability to tell what tone of the scale or chord is being played at any point in the solo ... “ah, that note was the #4 resolving to the 6th resolving to the 5th!”; it means hearing the piano, bass, soloist, drums, etc. individually as well as collectively.

I have found that there are many levels of hearing. Some people hear. Some people can really hear! And some people can seem to hear and identify almost anything that is being played. They can seem to sing or play back portions of solos right after the performer has played. How can they HEAR, and we can’t seem to find the roots, scale, qualities, or what time signature the piece is in?

I’m firmly convinced that if all students from the first grade (even kindergarten) through their last year in college were exposed to simple ear training exercises that allowed them the opportunity to identify what they were hearing on the radio, TV, records, jazz, opera, orchestra, chorus, band, etc., our music scene in general would be much different! In my opinion, if simple ear training exercises, coupled with simple music theory, were carried out in public school, the public would demand music of a much higher calibre than they are presently consuming. Why would they demand “better” music? Because they would HEAR that the music they are being fed is too repetitious, trite, and banal to warrant our attention, much less our money on the sales of records or concert attendance.

One of the reasons jazz music, especially the music from Bebop to the present, has never had a big audience is due to the amount of thinking required to actually get to the essence of the music. The average person today doesn’t want to think about music, he just wants to enjoy it. And he usually will settle for the same thing day after day. He feels life is too difficult to have to think about the music he is listening to. Hence the gap between the performer and the listener in the world today. I do not mean to imply that listening to music intellectually is not enjoyable.

This would be an excellent time to read Jerry Coker’s *Listening to Jazz*, published by Prentice-Hall. This is a great book on how to listen to jazz and is accessible to the layman.

For ear training purposes, Volume 21 “Gettin’ It Together” (2 CDs/Bk) of the Aebersold Play-a-long series will give you much to work with:

I suggest beginning by simply putting the first track on and sing the roots. After singing the roots, sing the first five notes of the scale. Then, try singing the triad, 1, 3, and 5 of the scales. By this time you can probably sing the entire scale. Don’t forget to sing the 7th chord and the 9th chord, just like you are doing with your instrument. Also, don’t forget to isolate individual pitches and sing them, such as the 5th or the 9th or the 3rd, etc.

Try starting in the middle of any of the tracks (begin with major) and see how long it takes you to find the root. You may want to sit at the piano while doing this in order to occasionally check yourself. After you find the root, can you sing the scale or even improvise?

All the time you are singing, be aware that each tone in the scale or chord has a number assigned to it. Be thinking these various numbers whenever possible.

Play them in your car. Sing exercises, patterns, and improvise. While doing so, be aware of the pitch you are singing. You may want to buy a pitch pipe and keep it in your car to help identify the roots, 3rd’s, 5th’s, etc. P.S. keep your eyes on the road!

Being able to sing and identify intervals is a key part of ear training. Experiment with singing or playing with the left channel of the recording only. Listen carefully to the bass.

I have found it helpful to memorize a song title that begins with a certain interval. For instance, the interval of a perfect 4th ascending is the first two notes of *Here Comes the Bride*. By singing the first two notes of *Here Comes the Bride* and realizing it outlines a perfect 4th interval you can begin to center in on perfect 4th’s whenever they are sounded. Or, it may help you to actually sing, or play on your instrument, in tune, the interval of a perfect 4th.

I like to use the following table as a guide to identify correctly whatever interval is being played. I will list intervals and some songs that begin with that particular interval. Remember, intervals ascend and descend. (see next page)
I have found it helpful to memorize a song title that begins with a certain interval. For instance, the interval of a perfect 4th is the first two notes of *Here Comes The Bride*. By singing the first two notes of *Here Comes The Bride* and realizing it outlines a perfect 4th interval you can begin to center in on perfect 4th's whenever they are sounded. Or, it may help you to actually sing, or play on your instrument, in tune, the interval of a perfect 4th.

I am listing intervals that correspond with standards or kiddie tunes of the past 70 years. If you are not familiar with these songs, they probably won’t help you in identifying intervals. In that case, I suggest you write down song titles that you are familiar with, such as current commercials on TV or radio, pop songs, religious songs, or anything that begins with an interval you need to work on. It is usually harder to find songs that begin with descending intervals.

I am listing intervals that correspond with standards or kiddie tunes of the past 70 years. If you are not familiar with these songs, they probably won’t help you in identifying intervals. In that case, I suggest you write down song titles that you are familiar with, such as current commercials on TV or radio, pop songs, religious songs, or anything that begins with an interval you need to work on. It is usually harder to find songs that begin with descending intervals.
BASIC KEYBOARD and CHROMATIC SCALE

1. Notes ascend as they go to the keyboard's right. Up the keyboard.
2. Notes descend as they go to the keyboard's left. Down the keyboard.
3. An interval is the distance between any two notes.
4. Half-steps and whole-steps are the units which are used to measure intervals.
5. The interval between any two successive notes on the keyboard is a half-step. Two half-steps equal one whole-step.
6. A –3 is called a minor third and equals 3 half-steps. A M3 is called a major third (4 half-steps).
7. For + means to raise the note a half-step.
8. – or – means to lower the note a half-step.
10. Intervals can be either major, minor, augmented, diminished, or perfect.

THE CIRCLE or CYCLE of FOURTHS

The “CIRCLE of FOURTHS” can also be called the “Circle of Fifths” or just “The Cycle.” Practicing the scales, chords, and ideas in general via the cycle has been a common practice routine for jazz musicians and is highly recommended. It is a disciplined way of working through all twelve keys. Plus, many bass root movements to jazz and pop songs move through sections of the cycle.

SCALES/MODES BASED ON MAJOR SCALE

Outlined below is a chart listing the seven scales (sometimes called Modes) that combine to form our major scale. The names in parenthesis are derived from early Church modes (16th century) and several names are still in use today — Dorian, Lydian, Mixolydian.

The interesting thing about the above scales is the fact they all share the same key signature, no flats or sharps! They are all related.

The scales which are used most often in Jazz are: Major, Dorian Minor, Dominant 7th (Mixolydian), Lydian, and Half-Diminished. Practice these first.
**HOW TO PRACTICE IMPROVISATION**

by JERRY COKER

Given below is an example of a schedule that may help you to organize your practice time. This schedule is based on a seventy-five minute period (1 hr., 15 min.), but it could be changed proportionately to fit a shorter or longer period or modified to allow time to take up instrumental studies (long tones, dexterity exercises for the fingers, range studies, reading, etc.).

**A DAILY PRACTICE SCHEDULE:**

<table>
<thead>
<tr>
<th>Topic Sequence</th>
<th>Minutes Spent</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) A SLOW MELODY (tune)</td>
<td>5</td>
</tr>
<tr>
<td>2) SCALES AND PATTERNS</td>
<td>15</td>
</tr>
<tr>
<td>3) PATTERN APPLICATION</td>
<td>10</td>
</tr>
<tr>
<td>4) IMPROVISATION EXERCISE</td>
<td>5</td>
</tr>
<tr>
<td>5) TRANSCRIBED SOLO</td>
<td>15</td>
</tr>
<tr>
<td>6) SPECIAL DISCIPLINES</td>
<td>10</td>
</tr>
<tr>
<td>7) LEARN A TUNE</td>
<td>15</td>
</tr>
</tbody>
</table>

**TOTAL** 75

A new set of melodies, patterns, exercises, transcribed solos, disciplines, and tunes should be taken up each week. Such a turnover in materials will help insure a steady rate of progress. Items 3 through 7 should be played with recorded accompaniment. "SPECIAL DISCIPLINES" refers to studies aimed at resolving weakness in areas such as playing fast tempos, time-feeling, use of all rhythmic levels, building intensity, or cultivating a melodic sense. The learning of a tune should encompass melody, chord progression, appropriate ingredients, and familiarization with the most significant recordings of the tune (the listening is done at another time, however).

**HOW TO PRACTICE**

by DAVID LIEBMAN

One major point to remember concerns the avoidance of attempting to accomplish too many goals while practicing. The mind cannot easily digest more than one or two major points at the same time and still be effective. Always be very clear as to what you are practicing a particular exercise for. Example: Long tones on saxophone are for breathing and evenness of sound—no inflections, vibrato, etc. Scales are for speed and fingering difficulties, etc.

STARTING A PHRASE OR MELODY

1. At what part of your instrument will you begin your idea? Middle register, high, low?
2. How do you want to begin? Slowly, with held notes and use of space/rest? Quickly, with lots-of attention, motion, visibility? Moderately so as to suggest a searching mood?
3. What note of scale or chord do you want to begin with?
4. Once you begin, do you want to ascend, descend or stay in one area, register?
5. Do you want to use pick-ups ... one, or more? If so, make sure they lead to the first strong beat!
6. Once you’ve begun your phrase, how long are you prepared to maintain your continuity, thoughts, ideas? One measure, two, four, eight? Have you thought of it?
7. What rhythm are you going to initially play? Does your mind already “HEAR” the notes/pitches in rhythm? Can you actually play them? Remember, your first phrase represents the first several words or idea of a sentence. Think before you begin.
8. Chord tones (1, 3, 5, 7) are good notes to begin a phrases with. Know where they are on your instrument. 0
9. Is your initial idea coming from your mind or is it something that your fingers have picked out?
10. Wind players ... be sure you’ve taken a good breath BEFORE you start each phrase. You need to SUPPORT the tone in order that it may effectively carry your musical thoughts to the mind of another.

PICK-UPS: The most used pickups are half-step, leading tone pickups such as: 7 to 1, #2 to 3, #4 to 5, 4 to 3. Some whole-step leading tones are: 2 to 1, 6 to 5. In a MINOR KEY we use: 4 to b3, 5 to 4, 2 to 1, b7 to 1 or I to b7, 5 to 6, 6 to maj.7th, I to 2, You can also use one chord tone to another such as 3 to 5, 7 to 5, 3 to 1, 1 to 3, 7 to 9 or 9 to 7. You can also use phrases such as 5, 6, 7, to 1; 5, 7, 9, to 1; b3, 3, 5, 6, to 1. The rhythm that you choose is also very important in making the pick-ups sound like they are LEADING TO the first DOWNBEAT.
ARTICULATIONS:
How To Better Express Yourself

One of the special features of jazz music is the articulation that the various players use in expressing themselves through their music. Some players enjoy using the standard swing style articulation very common to the Swing and Bebop eras, others use little articulation relying on legato or slurred phrases, some use staccato in their playing to add interest or emphasize certain notes or phrases.

Most all players eventually arrive at a style of articulation that is suitable for expressing themselves. Young players often struggle with getting the various muscles to respond at the precise time the fingers touch the keys, be it saxophone, trumpet, piano, guitar or whatever. Think of articulation as proper enunciation. No one enjoys listening to a speaker or a musician who cannot properly or effectively get his message across because his mind is not coordinated with his voice, lips, fingers, breath, etc.

Some players seem to have a natural ability to articulate in the jazz idiom. These players usually have listened to records and have etched into their minds the common, most used styles of articulation of the MAJOR jazz musicians. In incorporating these past styles of articulation into his own concept of playing music, he often will borrow a little here, a little there, and some of his own, and in the end be able to play out of several bags, as it were.

One major stumbling block that may be turned into a stepping stone is the player's use of too much tonguing tat tat tat tat tat or tut tut tut tut. Note: For keyboard, bass, guitar, and others, “tonguing” in this article can mean Attack or Emphasis. When you play several tongued notes in a row (one right after the other), the effect is a choppy feel. The music of the past forty to fifty years has been leaning toward a more relaxed, legato, smooth sound and flow. When I hear a player play phrases with the tat tat or tut tut articulation, I immediately feel this person has not had a chance (or has not taken the time) to hear jazz music as it has been played over the past forty years by the major jazz players. He should be tonguing legato style - tah tah tah tah or tu tu tu tu. Jazz is still basically an aural art form and the chances for you to be a jazz player without listening to the music that has come before you are very slim. With all the records on the market today there is no excuse to not be aware of the various schools of articulation and the main exponents.

When a note is tongued it naturally emphasizes that tone. It makes it stand out from the notes preceding it and the notes following it. By practicing the following exercises, listening to jazz musicians on record and in live performance who play the same instrument that you do, experimenting with articulation in general and keeping an open mind, I feel you can improve your playing and in the process be happier with the music you are playing. Good articulation definitely improves communication between performer and listener!

All of these exercises should be played with a metronome. Begin slowly and gradually increase the tempo. Don’t increase the tempo too rapidly. Make sure you are listening to yourself as you play. The articulation has to become AUTOMATIC before it will begin to sound natural. Don’t rush or force the exercises. Eventually, make up your own exercises and move the accented notes around in the scale. Gradually broaden the scale to include two octaves and then move on to include your entire instrument’s range! I feel it is a good idea to begin with a fairly heavy accent, then medium, then light. For those who haven’t done this before, they need to hear what an accent sounds like, and by playing heavy at first the idea seems to come in focus quicker.

Several players who I really made significant contributions in the flow of jazz articulation are: Cannonball Adderley, Sonny Rollins, Phil Woods, Freddie Hubbard, Clifford Brown, Miles Davis, John Coltrane, Dave Liebman, Wes Montgomery, Herbie Hancock, Lee Morgan, Ron Carter, Art Farmer, Lee Konitz, Charlie Parker, Clark Terry, J.J. Johnson, Slide Hampton, Woody Shaw, Kenny Dorham, McCoy Tyner, Ornett Coleman, Horace Silver and Joe Henderson. The list goes on, but when I think of these players and others I haven’t mentioned, one of the outstanding features is their articulation and how it relates to the jazz tradition. Try to get the sound, Sound, SOUND in your ear!! You learn more about articulation from listening to music than from reading about it or even verbalizing. Opening your ears is one of the key ingredients in becoming a jazz musician. Practice with your eyes closed and listen to each notes’ articulation.
You want to get to the point where you can instantly accent (heavy, medium, light, staccato, legato, breath, throat, stab, jab, etc.) any note or group of notes anytime you choose without disrupting the FLOW and FEEL of your melodic lines.

MOST IMPORTANT: Don’t get stuck practicing the G major scale or the chromatic scale. Use (practice) these articulation exercises over ALL scales and chords in ALL keys. Remember, we improvise in all keys, not just the easy ones. Don’t we?

Sonny Rollins, a master of articulation, used exercises similar to these to develop his personal jazz style.

Tongue every other note on the up beats.

1. Tongue every other note on the up beats.

2. Tongue the 4th note.

Chromatic — every other note on up beats.

3. Chromatic — every other note on up beats.

Random tonguing

4. Random tonguing

5. Random tonguing

Chordal exercises

6. Chordal exercises

A good order for practicing scales would look like this: Major, Dom. 7th, Minor (Dorian), Lydian dom., Lydian, Whole tone, Diminished, Dim. whole tone. Practice going from one scale right into the next like this:

Use any of the suggested articulations for the exercise below, or, change articulations every two bars.

7. Use any of the suggested articulations for the exercise below, or, change articulations every two bars.
The first note (it's a pick up) could always be left off without hurting the rest of the phrase.

1. This is a good starter rhythm.

2. The four eighth notes help define the target note — half-note.

3. Syncopation

4. Eighth notes help your phrase beginnings. They give motion.

5. etc. anything

6. Ascend

7. 3 2 1 7 1 3 5 7
THE BLUES SCALE AND ITS USE

The blues scale consists of the following: Root, b3rd, 4th, #4th, 5th and b7th.
EXAMPLE: F blues Scale = F, Ab, Bb, B, C, Eb, F

When playing a twelve bar blues in the key of Bb, use the Bb blues scale: Bb, Db, Eb, E, F, Ab, Bb

The blues scale can also be used over minor chords when the minor chord is sounded for 2, 4, 8, or 16 measures or longer. EXAMPLE: If D minor is sounded for eight measures, you may use the D blues scale: D, F, G, Ab, A, C, D

When playing in minor tonalities you may choose to alternate between the dorian minor and the blues scale, both having the same root tone. EXAMPLE: If D minor is sounded for eight measures, play D minor (dorian) or play D blues scale or alternate between the two scale sounds.

The blues scale is used to convey a “Funky,” “Down-Home,” “Earthy” or “Bluesy” sound/feel. Rhythm and blues players use this scale extensively. Don’t run it into the ground by overuse! Experiment with the blues scales listed below and apply them to recorded tracks on your play-a-long recordings.

After you become familiar with the blues scale as I have it listed, you may want to add tones to the scale which give the scale sound more variety. *Added tones are underlined.* EXAMPLE: F blues scale = F, G, Ab, A, Bb, B, C, D, Eb, F

This scale sounds strange when played straight up or down. Jazz players usually play bits and pieces of the scale or make up licks utilizing certain notes of the scale. You will eventually want to transpose this scale to all twelve keys for practice. For now, learn it in Bb and F concert.

**IMPROVISATION: PLAYING THE BLUES**

The Blues is a musical form that jazz musicians have always embraced because it allows them the opportunity to express emotion and everyday feeling and intellectual concepts which are often learned by studying another player’s style and conception. Most beginning improvisers use the Blues as a springboard to other jazz forms. Many band directors and private teachers feel there is not too much to playing a decent blues solo. They feel that you learn the blues scales of the key the blues is in and just sorta’ improvise what you feel over that scale sound. They probably think this is what they are hearing when they listen to jazz players on radio or records. I admit, they do hear some of that, but, if you check out the major jazz influences, you will begin to hear much more than just the blues scale.

In this article I would like to point out things to watch for in the blues that will make your playing more rewarding, convincing and musical. We should begin by asking you to sing (with your voice) several choruses of blues along with a record. A play-a-long recorded version of blues would be excellent because you don’t have to listen to a soloist - you are the soloist. I suggest tapping yourself so you can listen to yourself back and then, with your instrument in hand, try playing the phrases that you just sang! I contend that what we sing is often closer to the REAL YOU than what comes out of our instruments. On our instruments, we are inhibited and limited by our lack of knowledge of the instrument. If this is so, and I truly believe it to be so, the musician who knows his instrument well will have a much better chance of conveying the music that is contained within his brain to you the listener. When you are trying to play on your instrument what you just sung, be sure to play with the same inflections, articulation, dynamics, etc. If you are used to listening to jazz music, your vocal solo will probably be fairly recognizable to one who listens to this kind of music even though your voice may crack and sputter at times. Practice singing when you are driving by yourself or walking to school or to the office. Practice singing within your mind while lying in bed or waiting for a bus. Put your mind to use and it will instantly start paying you dividends in that you will be able to recognize phrases others play and this will enable you to put those ideas in motion on your chosen instrument. I have heard many fine jazz musicians say they have done much practicing away from their instrument. They mentally practice, and when they finally put their instrument in their hands it is as though they have already played the musical idea. In closing this paragraph on singing, I would like to point out that many musicians refer to a particularly beautiful musical phrase or solo as singing, even though the musician is playing an instrument. For example, “Coltrane was really singing.”

The blues can have many different chord progressions. For instance, rock, gospel, soul, country and other simpler forms of blues music don’t use the same chords as say, a Wayne Shorter blues, although they can if they want to. Usually, when you start beefing up the chords (harmony) one feels the song becoming more and more jazz influenced. When you start changing the chords to a gospel tune it just won’t sound the same and the people who listen to that type of music will probably not be satisfied because the music is no longer what it used to be. Since jazz is an evolutionary art form the various chord modifications and alterations are welcomed and have become a part of the energy that has kept it alive.

The basic 12 bar blues originally used what we call three chords. They are: a dominant 7th built on the root, a dominant 7th built on the fourth, and a dominant 7th built on the fifth of the key you are in. Example: a blues in the key of F uses these three chords - F7, Bb7 and C7. The order of occurrence is in a twelve bar sequence and can look like this:

||F7 |F7 |F7 |F7 |Bb7 |Bb7 |F7 |F7 |C7 |Bb7 |F7 |C7 ||

There are variations ad infinitum to the chord progressions which can be used over a blues. A few of the more popular are as follows (key of F). NOTE: When two chord symbols appear in the same measure, each chord gets two beats.

A.) ||F7 |Bb7 |F7 |Cmi F7 |Bb7 |Bb7 |F7 |D7 |Gm9 |C7 |F7 |Gmi C7 ||
B.) ||F7 |Bb7 |F7 |Cmi F7 |Bb7 |Bb7 |F7 |Ami7 D7 |Gm |C7 |Ami7 D7 |Gmi C7 ||
C.) ||F7 |Bb7 |F7 |Cmi F7 |Bb7 |Bb7 |F7 |Ami7 D7 |Gm |C7 |Dbmi Gb7 |F7 D7 |G7 C7 ||

One that Charlie Parker used on “Blues for Alice” uses descending root movement coupled with a cycle of fourths (upward). This is sometimes called Bird Blues:

||F |Emi A7 |Dmi G7 |Cmi F7 |Bb7 |Bbmi |Ami |Abmi |Gmi C7 |Ami D7 |Gmi C7 ||

Enough for the various chord progressions that can be used. If you need more info, checkout Dan Haerle’s book Jazz- Rock Voicings for the Contemporary Keyboard Player (available from Aebersold Jazz). He lists 17 different progressions ranging from very simple to very complex.

When beginning to practice the blues, I feel it necessary to get the feel of the roots, then the first five notes of each scale, then the triad (root, 3rd & 5th), and finally the entire scale. Here is what that would sound like:

When two chords appear in one measure you have to alter the rhythm of the pattern or condense the number of notes in your pattern. No matter what song you are working on, use the above method for getting acquainted with the harmonic
movement of the tune. I have heard two of the top jazz trumpet players in the country say this is the first thing they do when looking over a new piece of music that they are going to solo over. It makes good sense because it gets your ear accustomed to the various scale and chord sounds in advance of the actual soloing. I strongly advise using this method of practice when approaching ANY new song. The most important points in the blues progression, and these are often totally neglected by young improvisers, are the measures circled below:

It might be good to improvise on the 3rd or 7th of each chord in order to get the sound and feel of the harmony in your mind. Using just the 3rd and 7th will sound like this (notice the half-step melodic motion from the first chord to the second):

I urge you non-piano players to practice the example above with your left hand, one octave lower than written, and try playing scalar exercises with the right hand so you can hear the basic harmony (3rd & 7th) in the left hand while running patterns or soloing in the right hand. Most all good wind players have a knowledge of the keyboard and can play blues in several keys. It is much easier to solve harmonic problems while LOOKING at the piano keys than it is to see it on a sax finger table or trumpet valves. It is a good idea to lead into the 3rd or 7th by half step. This strengthens the harmony. Notes that are good choices at the beginning of measures are listed below:

The Blues scale can, of course, be played at any time during the chorus. The notes of the blues scale often clash with the given harmony but that is what makes it sound like the blues! If it didn’t clash in the beautiful way it does, we wouldn’t call it a blues. Be careful not to confine your soloing to just the sound of the blues scale and in so doing overlook possibilities of variety by employing the other scales such as minor and dominant. The blues scale in the key of F is: F Ab Bb B C Eb F

CONCLUSIONS:
1. Play what you hear in your head. Record your voice and transcribe it on your given instrument.
2. Sing with your voice while driving, showering, walking, etc. Think about the intervals you are singing. Are you singing bits and pieces of scales or chords?
3. Listen to jazz players play the blues.
4. Check out Volume 2 “Nothing But the Blues” play-a-long book and CD set. If you already have this volume, have you tried playing with all the tracks or have you just played the blues in Bb and F? Time to move on!
5. Remember leading tones are the 3rd and 7th usually. These tones should be emphasized in order to bring out the harmonic movement from chord to chord.
6. Use everything you have learned about melodic construction when playing on a blues. Don’t just play on the blues scale. That sound can wear pretty thin in the hands of a novice but can sound fine when interspersed with phrases from the original harmony.
7. Transcribe a solo or a portion of a favorite solo and play it on your instrument with the same inflections as the recorded version. The jazz tradition has been passed down by imitation and you can benefit greatly by transcriptions.

WHAT DOES “TO HEAR” REALLY MEAN?
1. “To Hear” gives confidence in performance, practicing, teaching, composing and life in general.
2. “To Hear” gives more enjoyment as a listener. He/she hears at a deeper level of appreciation and understanding and this level grows as the years pass!
3. “To Hear” will earn you appreciation as teacher/performer because your playing and your teaching/coaching will reflect your EAR’S knowledge. You’ll say and play things which reflect your knowledge and this can be extremely helpful to others in their musical quest.
4. “To Hear” instills independence, in a good sense. It helps dispel the “myths” of jazz and open one’s creative channels. “To Hear” removes burdens and barriers.
5. “To Hear” makes one feel worthy of becoming part of the whole. It provides a certain amount of security and confidence which allows us to approach with assurance the springboard of one’s “inner music.” “To Hear” removes insecurity which allows the mind to function properly, in its natural state.
6. “To Hear” ultimately means freedom!
Improvisation / by Jamey Aebersold

Variations on Blues

My last article dealt with the Blues (12 bar blues), so I would like to follow up with variations on the blues progressions that have been in common use in the jazz idiom. The term “three chord songs” are usually referring to the simplest of blues progressions. If you are in the key of F, the three chords which form the basis of the blues in that key are F7, Bb7, and C7. F7 is called a roman numeral I (one) chord. The Bb7 is called the IV (four) because it is built on the forth scale step of the F7 scale and the C7 is called the V (five) chord (usually called a V7 chord) because it is found on the fifth scale step of the F7 scale. A three chord tune could also be called a song that uses only I, IV, and V chords.

As blues evolved in the hands of the jazz musicians across the country by way of the radio and home stereos, more and more musicians played blues and naturally some would take liberties with the chord structure and alter the chords to match what they were hearing in their mind’s ear. As the various alterations were passed from musician to musician, they became part of the blues structure.

I have listed 17 different blues progressions found in Dan Haerle’s book “Jazz/Rock Voicings for the Contemporary Keyboard Player”, published by Studio P/R, Inc. The progressions read from left to right! The ones at the top are the easier, simpler progressions. As you move down the page they become more altered and present more of a challenge to the up and coming jazz player. It is best to practice with one complete progression until you feel comfortable with it, then move on to the next one. You may also want to substitute a measure in one blues with the same measure in another blues below or above. Number 14 is one that Charlie Parker used on a blues called Blues For Alice and another called Laird Bird. Number 16 uses a steady stream of minor chords (ii moving to dominant 7th chords (V7) usually called ii/V7’s or a series of ii/V’s. Experiment with the various progressions.

Begin slowly so you can hear the root progression clearly. In time, your mind will remember it and you can move more rapidly. Try to memorize each progression as you are working on it. Memory is a key process in improvising! Listen to jazz players on records and see if you can hear when they are substituting chords or scales or licks or patterns over the basic three chord progression. The masters do it all the time and with such ease that often our ears don’t even realize they have deviated from the basic progression being played by the rhythm section. You may want to check out Volume 2 “Nothin’ But Blues” in my play-a-long book/cd series. It contains eleven different blues progressions played by the rhythm section and you can play and practice along with them. Bass players and piano players can even turn off one channel of their stereo and substitute themselves for the player on the recording. It is a great way to practice with a professional rhythm section.

In order to play blues, you have to listen to people who play blues. Listen to the finest players, always!

### EXAMPLES OF BLUES PROGRESSIONS (In the Key of F)

</table>

**NOTE:** Portions of these progression could be combined with each other to create hundreds of slight variations of the above. Notice that practically all blues progressions follow a similar basic form, which is as follows: Final 4 measures - V (five) chord (or ii-V substitute) returning to a I (one) chord.
VALUES

THE GREATEST HANDICAP --- FEAR *(False Evidence Assumed Real)*
THE BEST DAY --- TODAY
EASIEST THING TO DO --- FIND FAULT
MOST USELESS ASSET --- PRIDE
THE GREATEST MISTAKE --- GIVING UP
THE GREATEST STUMBLING BLOCK --- EGOTISM
THE GREATEST COMFORT --- WORK WELL DONE
MOST DISAGREEABLE PERSON --- THE COMPLAINER
WORST BANKRUPTCY --- LOSS OF ENTHUSIASM
BEST TEACHER --- ONE WHO MAKES YOU WANT TO LEARN
GREATEST NEED --- COMMON SENSE
MEANEST FEELING --- REGRET AT ANOTHER’S SUCCESS
BEST GIFT --- FORGIVENESS
GREATEST KNOWLEDGE --- GOD
GREATEST THING IN THE WORLD --- LOVE

SUGGESTION: Put these values as a pin-up in your practice room.

Musical Training is a more potent instrument than any other, because rhythm and harmony find their way into the inner places of the soul.

-- Plato

BILL EVANS - piano player

-- Evans forged a wholly original and completely personal approach to jazz piano. Evans once said: "... (Music) should enrich the soul; it should teach spirituality by showing a person a portion of himself that he would not discover otherwise. It’s easy to rediscover part of yourself, but through art you can be shown part of yourself you never knew existed. That’s the real mission of art. The artist has to find something within himself that’s universal and which he can put into terms that are communicable to other people. The magic of it is that art can communicate to a person without his realizing it... enrichment, that’s the function of music."
BEBOP CHARACTERISTICS
Compiled by David Baker

1. COMPLEX HARMONIC IDEAS
2. LONGER MELODIC PHRASES USING ODD INTERVALS BUILT ON THE EXTENSION OF CHORDS (9ths, 11ths, 13ths, etc.).
3. HARMONY GAINED EQUAL FOOTING WITH MELODY AND RHYTHM (WESTERN INFLUENCE).
4. A SOUND INSTRUMENTAL TECHNIQUE WAS MANDATORY.
5. A GOOD EAR AND A QUICK MIND WERE INDISPENSABLE.
6. EIGHTH NOTES AND SIXTEENTH NOTES BECAME THE BASIC UNITS OF TIME.
7. HORNS AIMED FOR CLEAN, PIANO-LIKE EXECUTION.
8. PLAYERS FOLLOWED THE TREND TOWARD THE VIBRATO-LESS SOUND (REDUCING THE LATITUDE AND FLEXIBILITY OF SOUND PRODUCTION IS ANOTHER WESTERN CONCEPT). AS A PRACTICAL CONSIDERATION, VIRTUOSITY DEMANDS AN UNENCUMBERED SOUND.
9. THE EMPHASIS WAS MORE ON CONTENT THAN ON SOUND.
10. COMPLEX CHORDS PROVIDED SOLOISTS WITH A BROADER HARMONIC BASE; MAKING POSSIBLE A GREATER VARIETY OF NOTE CHOICES AND A HIGHER INCIDENCE OF CHROMATICISM.
11. CHORDS SERVED AS THE IMPROVISATIONAL REFERENTIAL RATHER THAN THE MELODY.
12. HOT IMPROVISATION (FAST, INTENSE, IMPASSIONED) WAS THE RULE.
13. COLLECTIVE IMPROVISATION WAS EXCLUSIVELY BETWEEN THE SOLOIST AND THE RHYTHM SECTION.
14. BEBOP WAS PRIMARILY A SMALL BAND MUSIC, BUT FOUND SOME EXPRESSION IN A FEW SELECT BIG BANDS.
15. A BROADENED CONCEPT OF CHORD SUBSTITUTION CAME INTO BEING; THIS HELPED TO PROVIDE A BROADER HARMONIC BASE.
16. THE MUSIC MOVED EVER CLOSER TO WESTERN EUROPEAN MUSIC BECAUSE OF ITS EMPHASIS ON HARMONY AND INSTRUMENTAL FACILITY AND ITS INCREASING USE OF OTHER WESTERN MUSICAL DEVICES.
17. THE ENTIRE LANGUAGE OF JAZZ WAS QUESTIONED, SUBTRACTED FROM, ADDED TO, PURGED, AND REAFFIRMED.
18. POLY-RHYTHM BECAME AN IMPORTANT FACTOR AGAIN.
19. BEBOP TENDED TO CODIFY ALL THAT HAD GONE BEFORE; IT IS CONSIDERED THE COMMON PRACTICE PERIOD IN JAZZ.
20. UNISON MELODY STATEMENTS WERE THE RULE OF THUMB BECAUSE THE INCREASING HARMONIC COMPLEXITIES MADE COUNTERPOINT AND SECONDARY LINES LESS FEASIBLE.
21. THE BREAK AS A STRUCTURAL DEVICE REGAINED POPULARITY.
22. BEBOP PLAYERS MADE LIBERAL USE OF “QUOTES” OR INTERPOLATIONS FROM OTHER TUNES.
23. BEBOP REDUCED MELODY TO ITS ESSENTIALS. THERE WERE FEW BACKGROUNDS, SOME BRIEF INTRODUCTIONS AND ENDINGS, AND SOME UNISON INTERLUDES.
24. MELODIC LINES WERE SCALAR RATHER THAN CHORDAL.
25. MORE SOPHISTICATED SCALES WERE INTRODUCED INTO THE LANGUAGE; ONE EXAMPLE IS THE DIMINISHED SCALE (1 b2 b3 3 #4 5 6 b7 8).
26. THERE WAS MORE EFFORT TO MAKE THE SOLO LINES COHESIVE BY LINKING THEM TOGETHER WITH TURN-BACKS, CYCLES, AND OTHER MUSICAL ADHESIVE DEVICES.
27. PIANO BECAME THE CENTER OF THE NEW EXPRESSION.
28. ASYMMETRICAL SOLO CONSTRUCTION BECAME A FACT.
PROPER USE OF THE BEBOP SCALE WILL INSTANTLY MAKE YOUR MUSICAL LINES MORE MATURE AND ALIVE.

TWO INTERESTING SHORT STORIES

The following two stories are true. The Charlie Parker story is from a recorded interview with Leonard Feather. It is available in two versions, a short 5 minute version and a longer 15 minute version. The long version is from a record titled “Rappin with Bird.” The label is MEEXA DISCOX and the record also contains eight songs by Bird.

The story about my friend John Welch was told to me by himself in 1976. After reading both stories I’m sure you’ll see Bird’s love of mankind and his willingness to be of help.

Charlie Parker: “I knew how to play two tunes in a certain key, the key of D for saxophone (alto sax), F concert. I learned how to play the first eight bars of Lazy River and I knew the complete tune to Honeysuckle Rose. I never stopped to think about there being other keys or nothin’ like that. So I took my horn out to this joint where a bunch of fellows I’d seen around were, and the first thing they started playing was Body and Soul, long-meter, you know. So, I go to playing my Honeysuckle Rose and there ain’t no form of conglomeration, you know, so ... they laughed me off the bandstand ... they laughed at me so hard ....... I was about 16 or 17 at the time. I never thought about there being any more keys, you know.”

Jamey Aebersold: It is obvious from the above statements that Charlie Parker didn’t know too much when he started out. Pretty much the same as most of us, I suspect. It is clear that Charlie Parker must have spent some time practicing the right things, listening to the right people, and in general, gathering as much knowledge about music as possible because he very shortly became a legend in his own time. I recommend reading the following book for more info on Charlie Parker’s life (all are available from www.jazzbooks.com)

“Bird Lives” by Ross Russell
John Welch: “I was eighteen years old and very naive. I had studied arranging with Bill Russo. I went out to South Dakota to the University there to study music and found myself really unhappy with the situation. I wrote back and forth to Bill Russo and he got me in with Lennie Tristano in New York City for lessons. So, I took the bus to New York and my first weekend in New York I went down to the Village with my horn (trombone) to a club called the Open Door. There was a big sign on the window saying “Jam Session - Sunday Afternoon”. This was Sunday afternoon so I went in with my horn and a group was playing a Blues in F. So I thought, well great, I enjoy playing Blues in F. I put my case on the table, took my trombone out and just walked right up and started to sit in with them. My playing at that point in my life was influenced by George Brunies, a Dixieland trombonist, so I started playing tailgate trombone with this group. They immediately brought Blues in F to a screeching halt and the piano player said, ‘Cherokee in E’ and took it at a tempo you wouldn’t believe. I thought, well that’s cool. I don’t know Cherokee and I don’t play very well in that key and I sure can’t play that fast on trombone, so I’ll sit this one out. So, I went back to the table and laid the horn in the case on the table and sat there. Everyone was looking at me as though cancer had arrived. Finally a guy in the audience came over and started unscrewing my horn, taking it apart and putting it away in the case. And he just looked down at me and said, ‘Kid, you’re obnoxious.’

“The band that day at the Open Door was Bud Powell, Max Roach, Charles Mingus, Miles Davis and none other than Charlie Parker himself!

“George Wallington was the fellow who came over to my table and dismantled my horn. And after he said that, I got the message!

“I realized I had really done something terrible. So they broke the set and Bird came over, came right straight over to my table. I remember him turning the chair around so he was leaning on the back as he faced me. Then he started talking to me. He said, ‘Look kid, what you were doing didn’t really fit in with this group, but you were doing it well. That’s great! And you just keep going.’

“Bird was so compassionate in that moment with me when everyone else was ready to kill me. And this struck me very much. As a matter of fact, when I think of Charlie Parker, I would have to say he affected me much more as a human being in my reaction to other human beings at that moment than musically.”

Jamey Aebersold: I feel that these two stories give us an excellent example of someone who seemingly, in jazz, has made it to the top but can still lean over and help the beginner and give encouragement when all else seems to fail. I would like to think one of the finest things jazz education can offer is the dissemination of valuable information to each corner of the musical world without any thought of return...

...The music of Charlie Parker has certainly done this...

PLAY-A-LONGS FROM JAMEY AEBERSOLD FEATURING CHARLIE PARKER

VOL. 6 - CHARLIE PARKER - “ALL BIRD”
INCLUDES: Now’s The Time • Donna Lee • Billie’s Bounce • Dewey Square • Yardbird Suite • Ornithology • Scrapple From The Apple • Confirmation • Thriving From A Riff • My Little Suede Shoes
Book/2-CDs (One CD has Slower Tempos) -- Order Code: V06DS

VOL. 69 - “BIRD” GOES LATIN
INCLUDES: Barbados • Marmaduke • Buzzy • Dewey Square • Yardbird Suite • Ornithology • Laird Baird • Moose The Mooche • My Little Suede Shoes • Bird Gets The Worm • Scrapple From The Apple • Donna Lee • Confirmation
Book/CD -- Order Code: V69DS
The next few pages are used for study and practice at the Summer Jazz Workshops. Let me encourage you to try them on your own. If you do not have a teacher or band director who can help you correct your exercises when you’re done, feel free to mail them to us and we will correct them and mail them back to you!

- Jamey Aebersold

$H = \text{Half Step}, \ W = \text{Whole Step}, \ -3 = \text{Minor Third (3 half steps)}$

Major Scale = W W H W W H
Minor Scale = W H W W H W

I have listed one of the three chord symbols and you are to fill in the other two chord symbols. The exercise reads from left to right. When in a minor key, the ii chord becomes half-diminished, and the V7 chord is usually altered with b9 and +9.

</tbody>
</table>

The distance from the root of the ii chord to the root of the V7 chord is a Perfect 4th. A Perfect 4th interval is equal to 5 half-steps. The distance from the root of the V7 chord to the root of the I chord is a Perfect 4th also. Try to memorize the sequences intact: ii/V7/I. Think of each chord as being related to the chord on either side of it. Remember, the scales which comprise ii/V7/I in major keys contain the same key signature.

**EXAMPLE:**

<table>
<thead>
<tr>
<th>ii</th>
<th>V7</th>
<th>I</th>
</tr>
</thead>
<tbody>
<tr>
<td>D−</td>
<td>G</td>
<td>C</td>
</tr>
</tbody>
</table>

all contain no sharps and no flats.
1. The +9 of B7+9 is ___________

2. The diminished scale has how many different tones? ___________

3. How many notes are in a whole tone scale? ___________

4. When you see the chord symbol C7+5, is the 4th also raised? ___________

5. How many half steps equal a perfect 4th? ___________

6. Write the cycle of fourths beginning with D, G, C, ______________________

7. Where does a V7 chord usually resolve to? ___________

8. Can a II chord sometimes be a dominant 7th instead of minor? Yes ____ No ____

9. Write a B♭ Blues progression. Be sure to use a II/V7/I in the last four bars.

10. Name the ♭9 and the +9 in the key of B♭. ___________ ___________

11. F♯ is the raised 4th of what scale? ___________

12. If D♭ is I, what is II? ___________

13. Write the chord symbols for II/V7/I in E♭: ___________ ___________ ___________

14. How many different major scales are there? ___________

15. How many different tones are in the chromatic scale? ___________

16. What two tones in the dominant 7th chord form the Tritone? The ______ & ______

17. What type (quality) chords are found in the regular Blues progression.

_________________ __________________

18. How many bars in a typical Blues? ___________

19. What two keys is the Blues most often played in? ___________ & ___________

20. What part of your body do you need to use more often in order to become a better musician?

Blues

Play the ROOT in the left hand to help get the sound of the Blues in your ear/mind. These voicings will eventually end up being played in the Left Hand so the Right Hand can improvise or practice scales, chords, patterns, etc.

47
Most standards and Blues use the harmonic progression called II/V7 or II/V7/I. This page and the next list the most common keyboard voicings and they are played by professionals everywhere. Memorize these and you’ll quickly find they are the meat and potatoes of popular American music. (Voicings taken from the Vol. 3 “II/V7/I” Aebersold Play-a-long book.)
For further II/V7/I voicings I highly recommend Luke Gillespie’s “Stylistic ii/V7/I Voicings for Jazz Keyboard.”
Two factors that stop people from improvising are fear of getting lost and fear of playing a wrong note.

Tape your own playing and listen to yourself. Don’t be critical. Just Listen.

Humor is an important part of creativity.

TV kills imagination.

Ignorance kills. So does smoking.

Can you practice for one hour without interruption?

If you don’t think before you play a phrase, it is not improvisation - just an exercise.

Sing! Sing! Sing!

It is easier to sing what you hear in your head than it is to play it on your instrument - your objective is to be able to play what you hear in your head.

Think each note before you play it.

Did anyone ever die from thinking too much?

The Blues is most commonly played in the keys of F and B flat by Jazz musicians.

Don’t practice the same thing forever - break new ground.

Scales are REALLY IMPORTANT!

Most music is grouped in 2, 4 and 8 bar phrases.

Most drummers sing the melody to themselves to keep their place but they can learn to hear in phrases.

The chromatic scale is your musical alphabet, know it from the lowest playable note on your instrument to the highest.

There are only two whole-tone scales and only three diminished scales.

Jazz players usually play eighth notes - play scales and exercises this way.

Use Jazz articulation when playing chords and scales, not tonguing every note or slurring every note but something in between. Articulation is a key ingredient of your musical personality.

Practice articulation - in 4 to 6 weeks you can transform your musical personality. Listen to the pros. When doing articulation exercises, play in a comfortable range where it is easy to finger. In this way you can concentrate on the articulation.

One of the reasons you don’t sound like the guys on record is because you haven’t practice articulation.

Play a solo along with a record in order to practice articulation - imitate the Jazz greats.

Inspire - refers to the spirit within you - in spirit.

Listen and lift ideas off records.

LISTEN! -Over and over and over! All the answers to your questions are on the records.

Listen to Jazz every day.

If you are well equipped technically you can take chances.

Don’t just use the play-a-long CD’s to keep time, use them to learn to hear the TONALITY of each key that is played.

In live Jazz there is interaction between players.

The best things in life are free and this free Jazz Handbook is one of them.

It is great to play with people who are a little or a lot better than you - they will push you to improve.

No one is a born player. Good instruments and teachers are important but the player makes himself.

You can’t imagine how much time and energy and thought Jazz musicians put into their craft.

Conjure up your own harmony. Sit at a keyboard and explore.

Play an arpeggio and keep it going in your head (mentally) while you sing a melody based on that chord.

Sing a 12-bar blues (it’s not that hard) just think and sing while driving or waiting for a bus.

Move a blues up a half step and back down, just think of exercises - it will make it easier when you get to the practice room.

Don’t spend practice time on ear training, chord spelling and other exercises that you can do while commuting or in the shower. In this way you will get the most musical training out of your day.

Charlie Parker practiced 11 to 15 hours per day for three years to four years.

Ear Training - once you can hear what you are trying to play, things get a lot easier.

Learn the distance between notes - intervals.

Scales are based on the intervals of half and whole steps, chords are based on minor thirds (3 half steps) and major thirds (4 half steps). Learn to hear these intervals without batting an eye.
POINTS TO REMEMBER -- cont’d

- When you sing, visualize the keyboard. If you don’t know what key you are in, just think in C. Do these important things away from the practice room - don’t waste practice time.
- Whenever you see a chord symbol be aware that it implies a horizontal scale (1, 2, 3, 4, 5, 6, 7, 8) and a vertical chord (1, 3, 5, 7, 9,11,13, 1) most chords are built from every other note of the scale - but not all!
- A keyboard is very important for learning harmony and for hearing chord qualities. On a keyboard everything is laid out simply for you. You can get an electric keyboard for under $100. They are very visual.
- Play “Mary Had A Little Lamb,” “Happy Birthday” and “Twinkle, Twinkle” in twelve keys to get the music from your mind to your instrument.
- If you start or end a phrase on a chord tone (root, 3rd, or 5th) you can’t go wrong.
- Practice a scale for two minutes solid, fast 8th notes, until it becomes automatic. Close your eyes, too.
- I have the notion that people learn instruments as an exercise in patience - to get to know themselves.
- Moving downward by half steps is easy to do with your voice but more difficult on your instrument.
- I, Jamey, know a lot and I can do a lot but I can’t do it for you!
- If you THINK a lot about what you are doing, you will remember a lot.
- To learn a tune, memorize the changes one measure at a time. Play the scale for each chord then arpeggiate each chord; next, improvise. Memorize, memorize, memorize!
- If you have a doubt about anything in music, find a piano and play it. Does it sound like what you hear on record?
- If you want to put a 4th in a major chord you must raise it (F#/C) Lydian, or play the regular 4th as a passing tone.
- Perhaps the major scale should have been constructed this way: CDEF#GABC Lydian. Think sharp 4 not flat 5.
- On Piano: Learn two note voicings with the right hand (3rd and 7th can tell you everything that is going on).
- If you are a non-keyboard player just play the roots with your left hand - memorize the roots to songs.
- III VI II V I (Turnaround) Turnarounds get you back to the top of the tune.
- A piano player (when playing for rhythm section) should play in the register from an octave below middle C to an octave and a half above middle C, so as not to crowd the horn players in the upper register.
- Jazz history has a protocol - don’t overplay.
- Watch how independent a piano player’s left hand is while they solo with the right hand.
- By using different voicings you can play chords without moving up and down the keyboard.
- Practice scales and exercises in time and without stopping - this is how we play music, after all.
- When you voice a chord on guitar or keyboard, you don’t have to play a lot of notes to sound good.
- B half diminished: BCDEFGAB. The C natural does not always sound so great so use it as a passing tone on an upbeat - You can play sharp 2 anytime (C#).
- SEQUENCE means to repeat a chord, a chord pattern or a melodic phrase in a different key.
- Spend 15 or 30 minutes per day with a keyboard even if you are a horn player.
- Jazz uses a few things over and over, it is a great relief to realize this - things do not seem so vast.
- There are only twelve keys, we play mostly in six of them ( C, Bb, Eb, Ab, F and G) not so often in (B, E, F#, C#, E and A) but jazz tunes modulate like crazy - we end up in all keys at one point or another.
- A key signature is for the melody (notational convenience); it can have very little to do with the harmony (key).
- Look at the last chord in a tune, (or the next to the last measure) if it is major and lasts for a full bar, that is probably the key the tune is in. Especially if the first chord is similar.
- This is my college education - my pitch pipe!
- A chromatic pitch pipe gives you independence - you can learn the musical universe on your own.
- Use a pitch pipe to learn all the intervals within an octave - don’t use practice room time for ear training - do it on the fly (hustle while you wait).
- Point to the “paper keyboard” and sing the notes as you point to different keys - after a few bars, check your accuracy with a pitch pipe.
- Grab a tune and just sing the roots.
- Don’t just sing a scale, visualize the keyboard or your instrument, keep checking yourself with the pitch pipe. Next, change key and do it again.
- Write a tune!
- It’s not hard to write a tune, Steve Allen wrote 450 tunes with lyrics in just one sitting, one day.
- Written music is a crutch! Memorize, instead.
- Transposed parts are a crutch! In the old days there were no fake books, we transcribed everything from records and learned to transpose in the process. We used our ears and memory.
• A good musician has a large repertoire in his head - he doesn’t rely heavily on books.
• Music doesn’t care who plays it.
• “Play what is there, we don’t need to hear you lying” - Art Blakey
• When you finally play what is in your head, you will meet yourself for the first time.
• “It takes a long time to play like yourself” - Miles
• You can answer all your questions about jazz by listening: LISTEN! LISTEN! LISTEN!
• When you solo, use repetition and sequence, don’t ramble. This allows the listener to anticipate what you are doing. This is known as thematic improvisation. Sonny Rollins’ solos are a great example of this.
• The interval from B flat to E contains three tones (B flat, C, D, E) hence the name tritone.
• Very few adults take the time required to learn to play jazz (or even simply to listen to it!)
• If you want to keep the harmony outlined, play chord tones on beats one and three.
• The root third, fifth and seventh outline the harmony.
• A characteristic of Bebop solos is that they outline harmony very explicitly.
• Do you have a dozen tunes memorized? Know the melody and the form, be able to write out the chord progressions (Jamey has 1000 tunes memorized!)
• Learn some tunes, and listen to music throughout the day to keep them in your head.
• Put your tune repertoire in a notebook so you can review it.
• As an exercise in getting your solos to sound like what you hear in your head, put a play-a-long CD on and play four bars, then sing four bars, then play four bars ... then sing, etc.
• To execute your objective: Think it - Say it - Do it!
• The average person has to learn to play in time - it does not come naturally. You can use a metronome.
• In jazz, time is very important - use a metronome for practice. When you practice scales and chords always practice in time and use proper articulation.
• Start to improvise early in your musical education.
• I’m interested in seeing people play music throughout their entire life.
• If you don’t improvise every day what is the point of practicing scales and chords?
• Music is supposed to be fun - have fun when you practice.
• When I asked some musicians how much of the day they spend thinking music they responded 24 hours per day!
• When you solo, look for common tones between changes, anticipate, think ahead. Think about the subsequent chord scale while you are improvising on the current one. It is not that hard, do it soon to prove this to yourself. This is called “playing across the bar lines.”
• The melody to a song is called the head.
• Obstacles are opportunities. Turn stumbling blocks into stepping stones.
• Don’t approach your practice as if you have to learn a great deal of information and acquire a great deal of skill so you then can play - instead start playing NOW! ! !
• If you play straight 8th notes you can play the bebop scale for a measure and end on the degree of the scale that you started on (most of our scales have seven notes and don’t work out this way.) The Bebop scale gives you 8 notes per measure instead of seven when played in 8th notes.
• The effective use of the Bebop scale often separates those who can play from those who are trying to play.
• Don’t forget that a chord symbol implies a scale (horizontal) and a chord (vertical).
• You can’t listen to records enough - it is so very important!
• If you don’t have a good sound who is going to care about what you have to say - even if you have great ideas.
• To find a lowered 7th just go down a whole step from the root.
• To find a sharp 9 go up a minor third from the root.
• The 3rd and 7th are the most important notes in outlining chord quality. The root is always assumed.
• Tape yourself and listen back objectively. Don’t be afraid to hear yourself as others hear you.
• In 4/4 time, if you want to give harmonic stability, play chord tones (1,3,5, and 7) on beats one and three.
• Dave Brubeck’s “Take Five” (in 5/4) is really bars of 3/4 followed by bars of 2/4. 1 2 3 12, 1 2 3 1 2, 1 2 3 1 2
• Lydian is a favorite substitute for major (especially in tune endings).
• Chuck Sher’s New Real Books are accurate.
• The tunes that jazz players like and that are challenging often have pretty chord tones in the original melody. Pretty notes can be the major 7th, 9th or #4 in MAJOR; b7, 9 and 4 in MINOR.
• Strive to solo on a tune, without playing the melody and without a rhythm section, in such a way that a listener could name the tune (this means you are doing a good job of outlining the harmony).
• The music is between your ears...
